sliding

■ Slide Ht: 1.17m

The slide offers that most sought after experience in play areas: sliding from height. The grip bar at the top of the slide is there to help avoid unintentional starts and to assist with correct pre-slide positioning. The all stainless steel one-piece design of this slide makes it wear-free. Height 1.17m: for discovering those first thrills.

climbing

■ Flexible log ladder Ht: 1.17m

The log ladder provides access to the 1.17m platform, in a traditional climbing position, prompted by the incline. This position helps compensate for the slight rolling movement generated by the side ropes. The 3 robinia wood logs provide strong supports and are easily grasped, helping children feel secure as they gain height and experience the associated sensations.

■ Vertical ladder Ht: 1.17

The vertical ladder gives direct access to the medium height platform. It is positioned at right angles to the platform for easy ladder-platform transfer, possibly assisted using the knees. The robinia wood rungs provide strong support for the feet. Controlling hand-hold will prove a real challenge for children.

■ **Platform Ht: 1.17m**

A triangular-shaped tower enables optimal distribution of play activities. The height of 1.17m is an intermediate height for bolder young children and mid-age range children wanting to progress. The robinia wood posts are exceptionally resistant. The floor is made of anti-slip compact for maximum safety.
