

Multi play structures

(technical specification)

J4932

- 1- **The different posts** (average diameter: 60 to 80mm / 100 to 120mm / 120 to 140mm) are made from sap free robinia. The robinia is sanded and has had its bark removed. Robinia is naturally rot proof and does not require any additional chemical protection; it is equally extremely resistant to attacks from external sources (insects, fungi, climatic variations), guaranteeing the long term durability of the playground equipment.

- 2- **The panels and the climbing wall** are made from larch (plank sizes 140 x 27mm / 45 x 68mm). Larch is naturally resistant and long lasting.

- 3- **The platforms** are made from a 12.5mm thick, textured, non-slip compact material (HPL). Further reinforcement is provided by galvanised steel supports, located on the underside of the platforms.

- 4- **The roofs** are made from larch logs (80 x 40 mm).

- 5- **The slide** is made of stainless steel.

- 6- **The 16mm diameter ropes** are made of galvanised steel cable covered with polyester. The cables are linked together and held in place by injected polyamide spheres.

7- **The fixings for the nets and chains** are made from aluminium.

8- **The porthole** is made from lacquered Marine plywood.

The colour is applied by electrostatic spraying of two-component polyurethane lacquer that is free of heavy metals, to ensure high levels of resistance to potentially aggressive chemicals such as anti-graffiti cleaning products.

9- **The fixings** are made of stainless or plated steel and protected by anti-vandalism polyamide caps.
